NumXventure Game App Details

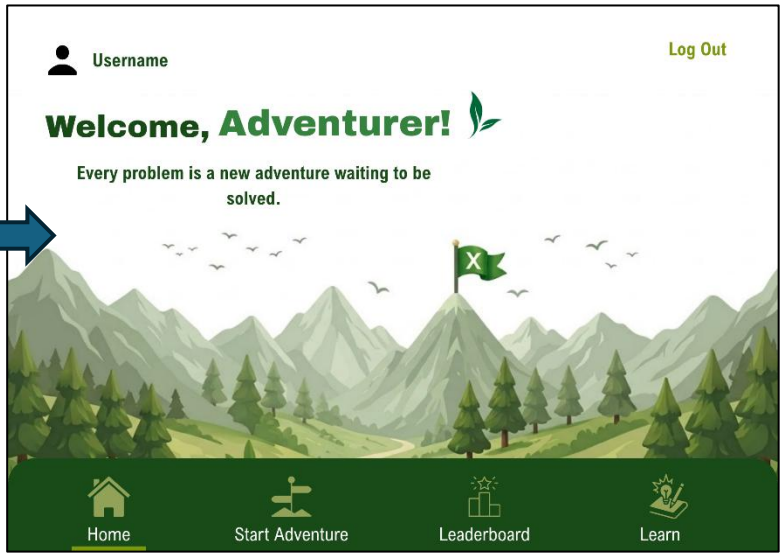

Landscape ni na app. And mayda sana siya loading something. And igmake sure nalang po na clear ngan mababasahan po an mga texts hehe

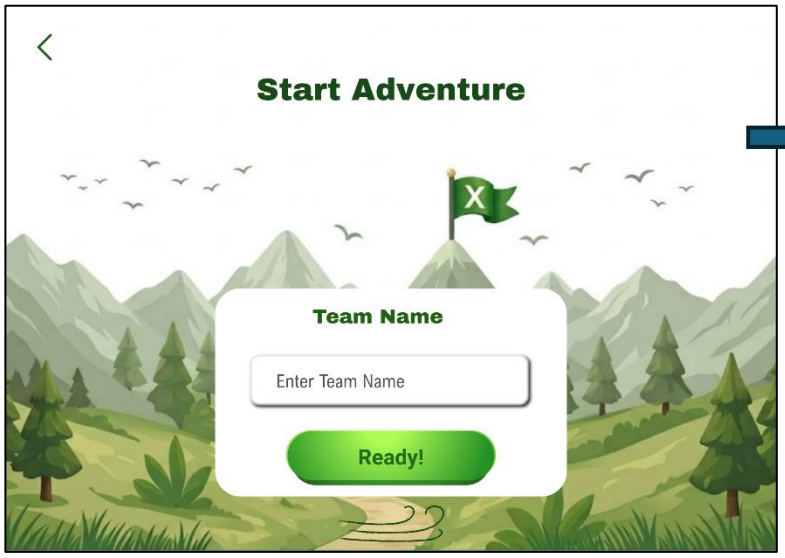

- After hit loading is the log in menu. Username (bawal po maghimo account na same username) and password (min. of 8 characters) lang po ang amon need for creating player or admin account.
- Kun kaya po hiya na sugad it lay out-it mga nakasurat and buttons.

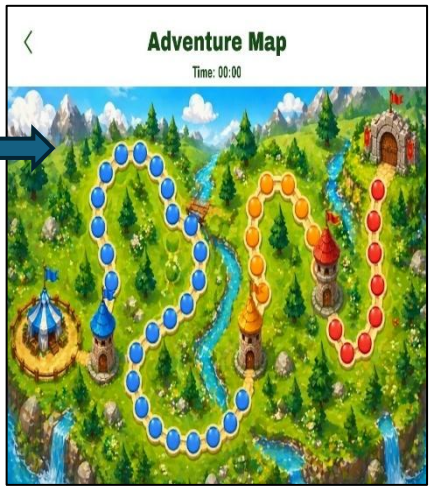

- Actually, dire kami maaram jud if pano ang paghimo sa account for player and admin. Nagbutang nalang kami han select role para if "player" or "admin" sila like madetect han system na asya ang kanilang role since may kaniya kaniya dashboard ang player and admin.
- After creating account may magawas liwat po na mapili hira hin character. And it na ira character makit-an dida may sapit ira username ha home page.
- Anyone po can create admin account, even a student. Pwede all students ang magmulay, and student gihapon magserve as the admin-ang mag control sa game.

Inin po sana na lay out, ang mga features or buttons and text ang mugawas sa home page for players.

- Once i-tap ang sa adventure button, sugad po inin magawas.
- Iton po na team name murag code ang function siya na need ig enter hit usa na player which is ang teacher/admin ang mag generate hiton na team name ha may game controls (will elaborate sa may admin dashboard), para inin masabtan kun hira hin-o it mga members per team. Since ang madaog hinin is by team, dire po by player. Ig-combine ang gems (serve as points dinhi na app) tanan na players per team, then pinakadako asya winner.

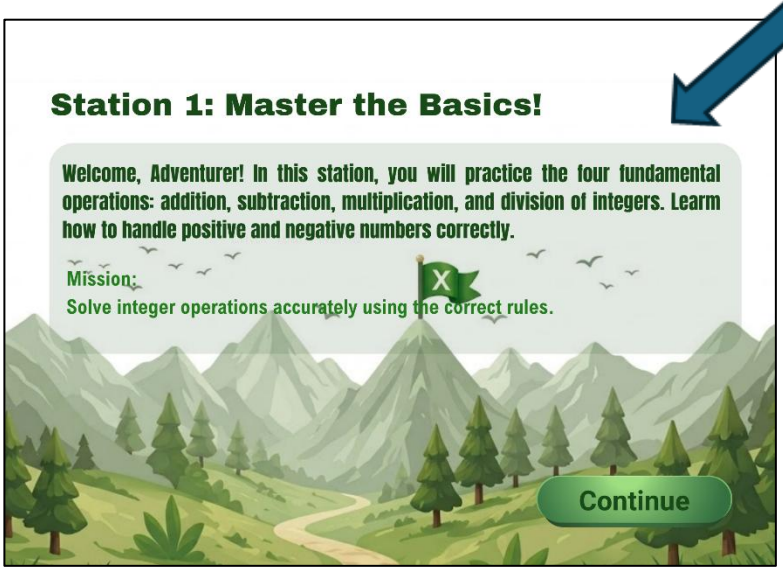

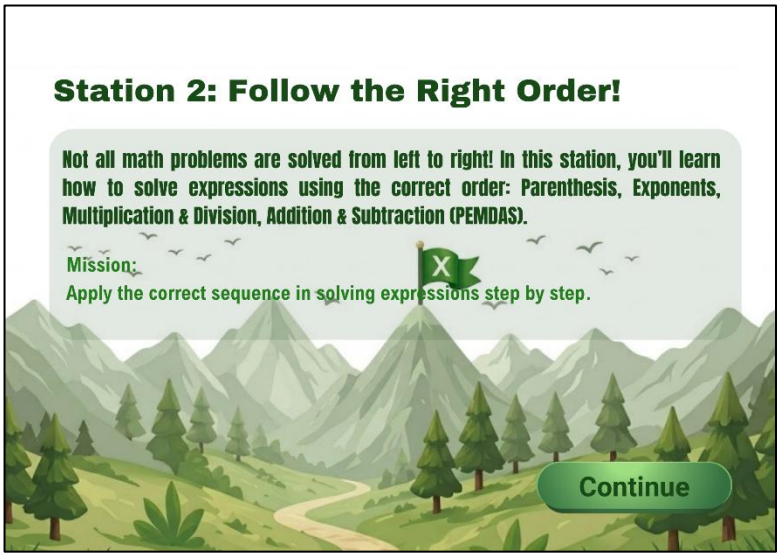

- After entering the team name, ang map an magawas, but parang sa upper view palang (adi ha langit ang pov, char). Since ang magdecide han pagstart han adventure is the admin (may button po didto ha kanan admin).
- Waray pa joystick, or anything if di pa start ang adventure.
- Tapos po once igstart na ng admin ang adventure, baga hin may transition na po na murag humarani na sa mapa ang pov, like ang character han player adto na and makit-an na sa base. (refer sa picture on the right side, from stickman party yan siya)
- Mayda na po didi joystick (or kun pano macontrol ang character), and also the remaining time gihapon po to finish the adventure since dapat mamonetor nira, and also their gems earned (mayda po 50 gems each member pagstart hit adventure).
- Pero waray siya pause na button ha player part, adto po an pause button ha admin, since para if need mapause an game, usa lang pag pause ha tanan na players, durungan sila mapause. Kay ang time may very crucial role siya, kay mayda lang specific na time to finish the whole adventure para ha tanan na players asya durungan an ira pag-answer dapat.
- (refer sa may screen for “Station 1: Master the Basics!”) If nakasakob na ang player sa tower then may mapop-up na screen, butangan nalang hin button na something “Continue”, after matap ang continue magawas na siya sa tower then mabaktas pakadto sa first circle.

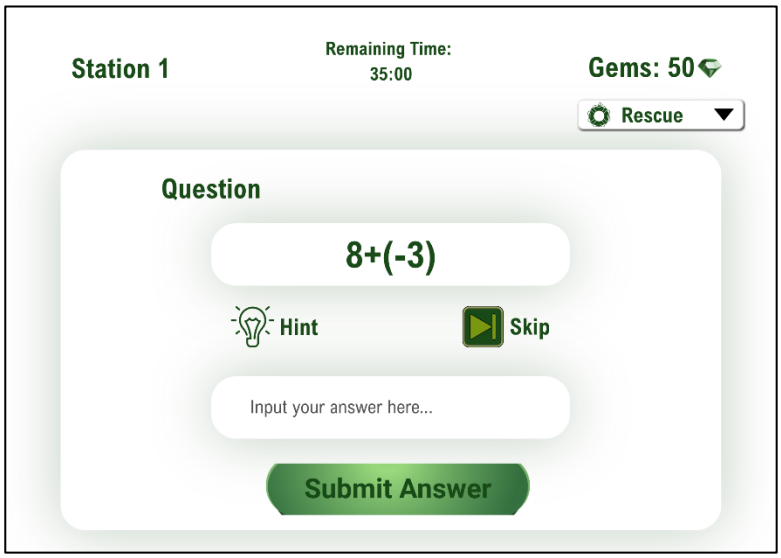

Important note: One circle=one item. Dire dapat maka proceed it player ha second circle kun dire anay hiya mag-answer han syahan na circle. Fixed naman po ang number of items per station.

- If ada na ang player sa first circle sa station 1, may magawas na button nga “Answer Quest!”(the same inin ha tanan nga circles. And an details han sulod han screen once magpindot sila sa answer quest, aadto sa iba na page)
- Makagawas la ha screen (an may question na plus the hint, skip, etc buttons) if mag answer hira, regardless if right or wrong an ira answer, basta nag answer hira makaproceed hira next circle since may kaakibat man na points if tama or correct an answer.
- After the first circle, habalik sa map, then mabaktas utro ha next circle. Tas maanswer na liwat. Hasta na matapos niya tanan na towers, tas makadto hiya ha victory gate.

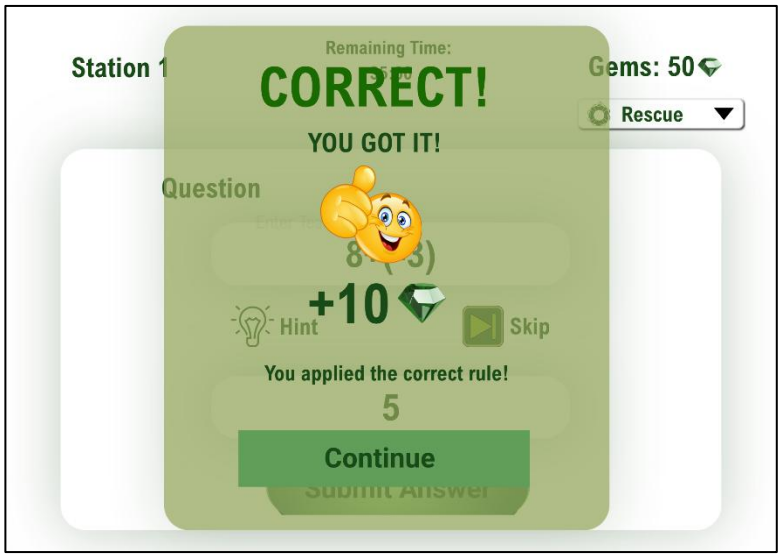

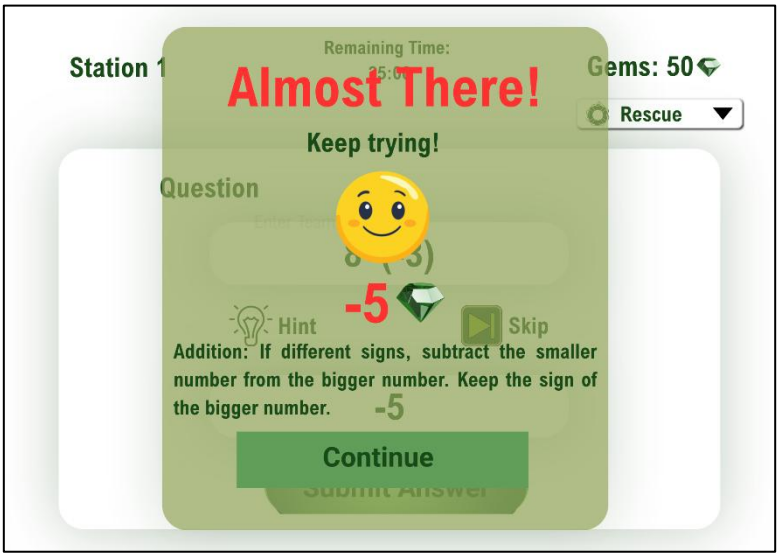

- So, aadto na sa base ang player and then mabaktas siya pakadto sa station 1 or the first tower.
- Pagkada nila ha front han tower, may magawas na “Enter Station 1”.
- Then, mao ni ang magawas anay na screen once makasakob na sila sa tower. Same with the other two towers/stations.

Station 2: Follow the Right Order!
Not all math problems are solved from left to right! In this station, you'll learn how to solve expressions using the correct order: Parenthesis, Exponents, Multiplication & Division, Addition & Subtraction (PEMDAS).
Mission:
Apply the correct sequence in solving expressions step by step.

Station 3: Power Up with Exponents!
Welcome to the power zone! In this station, you will learn how exponential notation represents repeated multiplication. Understand bases and exponents to simplify expressions easily.
Mission:
Evaluate and simplify expressions with exponents.

Learn

Basic Operations on Integers

This involves addition, subtraction, multiplication, and division of positive and negative whole numbers. Understanding these operations and their rules will help you solve numerical expressions accurately and confidently.

Understanding Numbers Expressed in Exponential Notation

The mastery of basic multiplication facts is necessary. You should not multiply the base and its exponent but multiply the base by the number of times as shown in the exponent.

Order of Operations on Integers

Expressions can be solved by following the rules on order of operations. The GEMDAS rule.
